To whom it may concern.

Mr Roger Moss

I have personally known Mr Moss in his capacity as Manufacturing Director at Moss Machine Tools Ltd. for many years.

My own function over this period was as Projects Manager - Major Automation Projects in the corporate Manufacturing Technology Department of Rolls-Royce plc.

Moss Machine Tools Ltd. was a valued supplier to Rolls-Royce of special machines and process plant both for development and production use.

Mr Moss' personal and professional contribution was always significant.

The equipment provided covered many engineering disciplines including mechanical, electrical, controls, hydraulic and corrosive environments.

We came to accept that the job would be well engineered from concept to detail and that emerging risk areas would be explored and discussed before commitment. We were able to offload problems with confidence.

Mr Moss could create solutions to meet the need, and with an eye to cost.

One project to which he was a major supplier won the Queens Award for Technological Achievement for Rolls-Royce in 1989. The excellence of the process plant and tooling from Moss being the key to that particular success.

As I recall Mr Moss always relished the engineering challenge and delivered, always made time and was only a telephone call away.
